Source-grounded research notes

This document is an original synthetic sample for publication review.
It contains no personal information or copyrighted paper extracts.
It demonstrates PDF reading, note linking and image export only.

1. Research question

Does retrieving a passage guarantee that a generated claim is correct?
No. A reader must still compare each claim with its supporting evidence.
These sentences are fixture content, not findings from a real paper.

Table 1. Example verification workflow

Stage	Reader action	Purpose
Retrieve	Read the passage	Find candidate support
Check	Compare the claim	Verify exact evidence
Record	Keep a source link	Make review reproducible

A toy scoring formula is S = evidence_count / claim_count.
The variables are synthetic counters and have no measured values.
Reference [1] is defined on page 2. It has no downloadable paper.

2. Evidence and relationships

A question card may connect to an evidence-check card.
A colored region groups both cards without replacing their content.
The exported image should retain its original proportions.

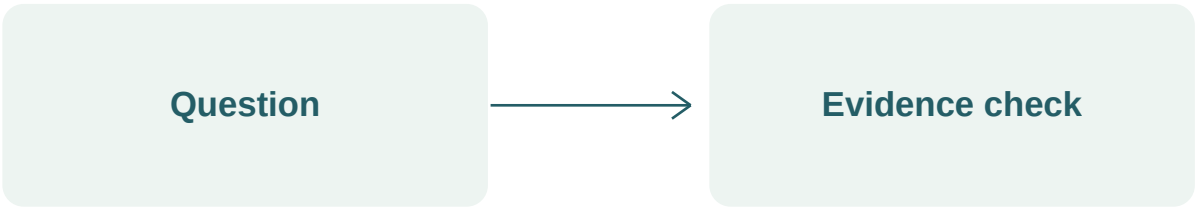

Figure 1. A synthetic connection between question and evidence.
